

# 2-PLANK HIRE CHECKLIST:

- Are the installers certified scaffolders?
- Does the system comply with Australian standards?
- Is the system engineered?
- Can the supplier show engineering/testing of equipment on request?
- Is there a handover certificate attached to the completed install?
- Have access points been installed for safe access to the scaffolding by trades?
- If installed prior to trusses, is the system correctly braced with adjustable braces, to prevent walls from moving and potential system failure?

Whichever company you engage, make sure they comply with the basic items on this checklist. Failure to do so leaves **you** and **your trades physically** and **financially** at risk.
